

Vehicle Delivery and Tracking Workflow Test Cases				
Test Case ID	Test Description	Test Steps	Expected Result	Priority
TC01	Verify job order creation	Create a job order from Warehouse A to Warehouse B with 3 serving points and delivery time window	Job order is successfully created and saved in system	High
TC02	Validate vehicle starts from Warehouse A	Start job in tracking system and verify initial vehicle position	Tracking system shows vehicle at Warehouse A	High
TC03	Check delivery at first serving point	Drive vehicle to Serving Point 1, mark delivery complete	Status updated to "Delivered" at Serving Point 1	High
TC04	Validate system records delivery timestamp at each serving point	Stop at each point and complete delivery	Delivery timestamps recorded and visible in tracking logs	Medium
TC05	Ensure vehicle follows correct route sequence	Attempt to deliver to Serving Point 2 before Point 1	System blocks action or shows warning for incorrect sequence	Medium
TC06	Verify on-time delivery within time box	Complete all deliveries and reach Warehouse B within defined window	System marks job as "Completed on time"	High
TC07	Handle late delivery scenario	Simulate delay and reach after deadline	System marks job as "Late Delivery" with timestamp	Medium
TC08	Monitor real-time tracking updates	Check map while vehicle is in transit	Vehicle position updates in near real-time on tracking UI	High
TC09	Ensure delivery data is visible to account user	Login to tracking web app and access job details	Account can view delivery points, times, and vehicle path	High
TC10	Simulate delivery failure and recovery	Mark delivery failed at Serving Point 2, then reattempt	System logs failed attempt and final success; status updates correctly	High
